

EDUCATION

Bachelor of Computer Applications (BCA)

Tecnia Institute of Advanced Studies, New Delhi, Delhi

CGPA: 8.75 | (2021-2024)

EXPERIENCE

Frontend Engineer Intern | Digital Axeron

(Jan 2026 – May 2026)

- ❖ Built a server-side filtered, sorted, and paginated data grid with **TanStack Table** for client record management.
- ❖ Integrated **TanStack Query** with shared query keys and stale-time config, cutting **redundant API calls by ~60%** on re-renders and navigation.
- ❖ Centralized auth token, user role, and UI preferences in **Zustand**, eliminating **prop drilling** across the component tree.
- ❖ Boosted **Lighthouse SEO from 68→94** and **Performance from 76→89** through semantic HTML, JSON-LD schema, and route-based **code splitting**.
- ❖ Enforced **Zod schema validation** on API payloads, intercepting **type mismatches** before they reached component state.
- ❖ Tech Stack: **React.js, TypeScript, TanStack Query, TanStack Table, Zustand, Zod, Tailwind CSS, REST APIs.**

ACADEMIC PROJECTS

Clavis — Hotel Management Dashboard [[GitHub](#) | [Live Demo](#)]

- ❖ Managed remote state via **TanStack Query**, implementing server-side filtering, sorting, and **pagination pre-fetching**.
- ❖ Utilized **Supabase** as a Backend-as-a-Service for **JWT authentication**, database operations, and image storage.
- ❖ Implemented **Compound Components** via **React Context** for internal state sharing, while wiring all CRUD operations with **React Hook Form** for strict **field-level validation**.
- ❖ Built an **analytics dashboard** with **Recharts** visualizing sales revenue, occupancy rates, and booking trends.
- ❖ Applied route-based code splitting with **React.lazy**, Suspense fallbacks and Error Boundaries improving **Lighthouse Performance from 74→90**.
- ❖ Tech Stack: **React, Supabase, TanStack Query, Recharts, React Hook Form, Styled Components**

Nimbus — Real-Time Weather App [[GitHub](#) | [Live Demo](#)]

- ❖ Engineered a custom **AQI calculation utility** applying **EPA algorithms** to convert raw pollutant mass concentrations into standardized AQI metrics.
- ❖ Applied **Zod schemas** to validate API responses at runtime; routing validation failures to isolated, per-section **Error Boundaries**.
- ❖ Integrated OpenWeatherMap, Geocoding, and Air Pollution APIs via **TanStack Query** with shared query keys, eliminating **duplicate network calls**.
- ❖ Built a **Leaflet** and **MapTiler** map with **root coordinate tracking**— location clicks and city selection update shared state, triggering a synchronized data refresh.
- ❖ Rendered skeleton loaders via **React Suspense** and component-level code splitting, boosting **Lighthouse Performance to 90+**, alongside a responsive CSS variable-based theme using **Context API**.
- ❖ Tech Stack: **React, TypeScript, TanStack Query, Zod, Leaflet, Shadcn/UI, Tailwind CSS**

SKILLS

Languages & Frameworks: React.js, TypeScript, JavaScript (ES6+), Next.js

State & Validation: TanStack Query, Zustand, Zod, TanStack Table

UI & Styling: Tailwind CSS, Styled Components, Shadcn/UI

APIs & Backend: Supabase, PostgreSQL, REST APIs

Architecture & Performance: App Router, RSC, Code Splitting, Error Boundaries, Web Vitals

ACHIEVEMENTS / CERTIFICATIONS

2nd Place — 41st National Conference, Research Presentation on Recent Trends in 5G & AI.

2nd Place — Rapid Coderzz, Competitive **Coding Challenge**, Tecno Vision Tech Fest.

Event Coordinator, Tecno Vision — Managed technical events and competitions for the annual college tech fest.

Certifications: Database Management Systems — NPTEL
